"Stunning looks, latest technology, widest choice"

Welcome to the latest range of gas and electric fires from CK Fires.

We have been working hard to bring you the widest choice of quality fires, including high efficiency gas fires, remote controls, stoves, and a wide range of styles to suit almost any home. The following fundamentals form the basic philosophy of our company: Quality, safety, style and choice.

Quality and safety

Our fires and stoves are built using the finest materials and all come with a 12 month guarantee and are rigorously tested conforming to all the legislative requirements including CE marking. Our gas fires have been developed with flame supervision devices as standard; these continually monitor the presence of a flame. In the unlikely event that the flame is extinguished the flame supervision device detects this and automatically shuts off the gas supply. Our gas fires and stoves are also fitted with an oxygen depletion system. This monitors the oxygen levels and in the event of a blocked flue will also shut the gas supply off.

Style

We cater for all tastes, traditional and classic designs are available in both gas and electric fires and stoves. For the more modern interior scheme we have some stunning contemporary designs.

Choice

Finally our choice is second to none. Our fires come in all shapes and sizes to suit full depth chimneys, precast flues, and even homes without a chimney or flue. Check for the flue icons throughout the brochure to identify which are suitable for your home.

The CK Fires team

The following symbols are used throughout this brochure to help you select the fire most suitable for your home.

Homes with a brick built chimney

Homes with a class 2 / prefabricated flue

Homes with a precast flue

Homes without a chimney or flue

Veyron

Hang on the wall, modern good looks, latest technology and no chimney required!

The Veyron HE is our latest addition to the 100% efficient range of High Efficiency products. The Portrait can be installed into a minimum room size of 23m³, the Landscape requires a minimum room size of 27m³.

The surrounding trim is produced using extruded Aluminium this enables us to create the sophisticated smooth flowing appearance. Additionally this process ensures an extremely high quality etched finish.

The fire is operated with one easy to use control, located at the bottom right hand corner. Simply push in and turn.

This fire can even be installed into occasional rooms such as, Dining rooms, Hallways, Conservatories, Kitchens or even the Study.

Installation is simple as the catalytic technology means that you don't even need a chimney or flue, additional purpose provided ventilation of 100cm² is required. An openable window is required in the room that the Veyron HE is installed.

An electric model is available featuring a pebble fuel effect and a 1 or 2kW top vented fan heater.

Please ask your retailer for further details.

Aislin Metallica

Hang on the wall, modern good looks, latest technology and no chimney required!

The Aislin high efficiency gas fire provides hang on the wall modern styling, without the requirement for a chimney or flue. All you require is a gas supply and a room of the correct size and ventilation requirements. The minimum room size for this appliance is 30m³ (typically a room 12' x 12' x 7'6") and 100cm² of purpose built ventilation. An openable window is also required in the room that the Aislin HE 30 Metallica is installed.

The Aislin Metallica is available in three striking finishes; Silver, Bronzed and Night Sky Black.

An Electric model is also available boasting a 20" wide flame effect, the fires cleverly concealed 1 or 2kW fan heater is controlled via the hidden switches located just under the front panel.

Please ask your retailer for further details.

Ferrara & Ferrara suite

An open fronted addition to the range, with a striking brushed Steel back, stylish fascia and remote control as standard.

One of our latest additions is the Ferrara, a 16" wide fire box featuring one of the most realistic burners available today, with a firewood log effect that, you'll really warm to.

Operation couldn't be simpler either; the Ferrara will spring into life at the touch of a button.

This amazing fire is available as either a hole in wall (as shown right), or as part of a stunning natural English limestone suite.

Fascia also available in Silver and Night Sky Black.

Akiva

Premium quality, authentic random fuel beds and maximum choice!

The Akiva range offers the best combinations of choice with unrivalled quality for most flue applications. Our random coal & pebble fuel beds have been painstakingly developed to give exceptional realism, along with a choice of traditional, classic or contemporary fascias. For ease of operation, choose from manual control, a conveniently mounted top slide control, or the very latest in battery remote control technology.

There is a wide choice of traditional, classic & contemporary fascias available in black, brass, chrome & satin stainless steel.

There is even a fan-flued option if your home doesn't have a chimney. (Manual control only).

The Akiva Extraslim is also available for those who require a shallow gas fire for certain pre cast flues, with a recessed depth of just 90mm, this fire will fit virtually any flue.

Akiva Prestige

Full depth random fuel beds, remote control, no chimney option available.

The Akiva Prestige is the best option for homes with traditional brick built chimneys, the full depth coal or pebble fuel bed gives that extra element of realism and glow. Our designs take the classic fireplace look into the modern home.

As with the Akiva range there is a choice of traditional, classic & contemporary fascias available in black, brass, chrome & satin stainless steel to suit your décor.

All the models have top fireslide controls as standard and there is a manual control or remote control option if required.

There is even a fan-flued model if your home doesn't have a chimney. (Manual control only).

A low lintel model is also available to fit in 508mm high openings, please ask your retailer for further details.

An extrawide 18" fire is available for larger openings and fireplaces.

Akiva HIW

This extremely versatile product is now available in two Hole in the Wall styles in Satin Stainless or Bronze.

The Akiva four sided is designed with simplicity in mind, available in Satin Stainless or Bronze effect, with a choice of either a coal or pebble fuel bed, and can be installed using either the Akiva or the Akiva Prestige fire for that extra authentic look.

Choose one of three Control options, manual control, the high level fire slide or the fully sequential battery operated remote control for extra simple functionality.

Akiva Vortex

The Akiva Vortex measures 740mm in height and width, this fire will fit into most chimney breasts. The tapered black inner frame gives you an extra deep effect that mesmerises every time you light the fire.

Available in a choice of either a coal or hand painted pebble fuel bed, along with a choice of either the Alena or the Adore fret. Finally decide which control option is most suitable, the standard manual control fire or the fully sequential remote control.

Afina HE

High efficiency traditional inset fires and stoves, plus no chimney required!

As no chimney is required the Afina HE Inset & the HE Stove are versatile in that they can be sited almost anywhere. All you require is a gas supply and a room of the correct size and ventilation requirements. The minimum room size for these appliances is 30m³ (typically 12' x 12' x 7'6") and 100cm² of purpose built ventilation. An openable window is also required in the room that it is installed.

The Afina HE Inset is a 100% efficient manual control flue-less gas fire available with either a coal or pebble style fuelbed. To compliment it there is a wide range of traditional fronts & frames available finished in a choice of black, brass, chrome & satin stainless steel, as well as a choice of three contemporary styled trims.

Element Electric

Our latest additions utilise state of the art LED technology coupled with a convector panel heater that provides up to 1kW of heat and near silent operation.

The Element range combines the realism of a traditional electric fire with today's latest LED technology. The LED flame effect consumes just 6 Watts of electricity (compared with up to 60 Watts from a normal light bulb). LED's have been tested for their longevity and should never need replacing.

Not only is the lighting system energy efficient, so is the heater. Traditionally air is projected into the room via a motorised fan blower. The static heater used in the Element provides up to 1kW of silent convected heat.

The heat output is regulated by a thermostatic control for absloute comfort.

The Element projects just 83mm into the room and comes with a choice of fire fascia options; choose either Black Glass or one of the four metallic fascias available in Silver, Stone, Bronze and Night Sky Black, each metallic can be complimented by a matching or contrasting trim.

Inset Electric

Akiva Electric

The Akiva Electric has one of the most realistic effects available today; using the latest diffuser technology the realism is superlative.

With its profiled trim and changeable bulb system you really can create an individual fire all of your own.

The contemporary fire comes in Satin Stainless and features a hand painted pebble fuel bed, with a fixed front, whilst the traditional model is available with interchangeable front options and a coal effect fuel bed as standard.

Choose between the standard Akiva black fret (design as per the contemporary), the Alena or the Adore fret in either Brass or Black, all suits the Akiva Electric superbly.

Afina Electric

One of the most versatile electric fires available today, the fire can utilise any of the trim options from the Afina range.

Choose between one of the three contemporary two-tone frames, or select one of the standard four colour options. Brass, Black, Polished Chrome or Satin Stainless. Then select one of the three fret designs, Blenheim, Adore or Alena, decide on the colour option and you have a tailor made your bespoke fire.

The Afina Electric is supplied with a 1 and 2kW fan assisted heater, switch control and a choice of either a coal or pebble fuel effect as standard.

You can even use the flame effect during those warm summer evenings without operating the heater.
